

Steve Lawrence Bio

Principal Steve Lawrence was originally from Wyoming where he grew up roaming its wide open spaces. It was there that he developed a love of geologic phenomenon and a curiosity as to the mysteries of the "Big Picture" or rather how all the small pieces fit to create the grand solution.

He started down his career path as a Geologist where he is credited with dating the oldest known rocks in North America as an undergraduate Geochemist at the University of Wyoming. Further research while in graduate school in Paleomagnetism allowed him to determine the location of North America approximately 180 million years ago during the Jurassic time period. He then decided to funnel his energies into creating a High School geology curriculum for those students who shared his passion for the Sciences. He has never regretted that decision. He has a deep-seated love of learning and a deeper passion for teaching. He holds degrees in Geology, Education, Education Leadership as well as his Wyoming Firefighter certification.

He is married to his soul mate, Charity, and has two children. His hobbies include Southwest and Hawaiian archeology, photography, reading and travel. He is fascinated by new places and learning about different cultures. He enjoys multicultural events and tries to teach his children to look at the world through the eyes of others.

Mr. Lawrence would like to finish his career by being an energetic, student centered administrator that can bring the love of teaching and learning to the faculty, students and community. "I look forward to the challenges ahead. I truly believe that you cannot forge ahead by constantly looking back, but rather we need to understand the past as a way of shaping our future."
